

## Forklift Attachment

Forklift Attachments Concord - Without forklift attachments, many jobs would be difficult, if not impossible. Forklift attachments make many jobs safer, easier and quicker to complete. Forklift operators require training for each attachment they will be using as well as their general forklift training. Forklift attachments come in a wide variety of hydraulic and non-hydraulic attachments. The benefits of utilizing a forklift attachment include decreasing: 1. Employee accidents; 2. Damage to stock; 3. Manpower; 4. Time; and 5. Fuel consumption. Equipment Considerations Forklift attachments can replace existing attachments or may be added to a machine that doesn't already have one. There are many equipment factors to consider prior to adding or replacing any forklift attachments. Considerations include the carriage type, the forklift model, the capacity of the forklift and the number of hydraulic functions used to power the features of the attachment. Not considering these issues will drastically increase the safety risks associated with operating the machine and its attachments. This can increase risks relating to operator safety, forklift damage, stock damage and more. Extra safety factors must be considered which will be discussed in more detail. Forklift Rating and Re-Rating Manufacturers give forklifts a lift capacity rating that needs to be considered and adjusted when adding or changing forklift attachments. Manufacturers of forklift attachments usually offer calculators available online to estimate the safe lifting capacity when using a particular attachment. It is important to note that only the forklift manufacturer can provide accurate lifting capacities. The first step before installing any attachment is to get in touch with the authorized local forklift dealer to request that that forklift brand is re-rated accordingly with the attachment. There will be a new specification plate that is factory authorized once the forklift manufacturer has re-rated the machine. The upgraded specification plate replaces the original plate and needs to be installed with the new forklift rating showing. Equipment Upgrades It is vital to note when working with forklift attachments the equipment's hydraulic function consists of a forklift valve that has a lever located near the operator which creates two areas for pressurized hydraulic passages for oil. Note that not every attachment is hydraulic; however, the hydraulic attachments provide more features compared to the number of valves the forklift offers. In these instances, one or more valves need to be added. There are numerous ways a valve can be added. The manufacturers of forklifts create accessories to simplify hose and valve routing. Due to the cost of labor and parts required, this process may not be practical. Alternative methods include adding a solenoid valve in conjunction with a hose or cable reel that diverts oil flow from an existing function. However, the operators' view may be compromised due to the cable reels and hose installation. These parts also may be easily damaged by their location. Special hoses and a solenoid valve kit can be used to create an electrical conduit out of the reinforced braid. These hoses are designed to replace existing ones and stay free from being damaged. The operator can enjoy a clear view with this option. Safety Considerations Before using any type of forklift attachment, adequate training must be fulfilled. The operator needs to be able to remove, fit and operate the attachment. Two important safety factors must be considered before the use of any forklift attachment. Firstly, it is important to note that any kind of forklift attachment will reduce the machine's nominal load rating. Forks and a stock fork carriage compute the nominal load rating; although, the precise load rating may be much lower. Secondly, the forklift's center of gravity will be affected when any forklift attachment is added. The forklift's stability will be reduced and this needs to be computed for safety. Due to the attachment weight being situated in front of the fulcrum point, the forklift needs to be driven as though it is partially loaded even when it is empty. Operators need to travel gently and slowly every time they use an attachment and take extra care while turning. Every attachment should be listed on the forklift capacity data plate. To maintain safety, special checks need to be completed before using any forklift attachment. The forklift attachment needs to be the right one for the type of forklift being used, appropriate for the load at hand, correctly attached, locked in place and permitted on the data plate of the forklift. List of Common Forklift

Attachments Discover a list of common forklift attachments and how they are utilized below. There are many more attachments available than are listed here but this will cover the most widely-used. As you will see, the large variety of attachments available have the capacity to greatly increase the efficiency of many jobs.

**SIDESHIFTER:** Allows the operator to move the forks laterally, allowing for easier placement of a load without the need to reposition the entire forklift.

**FORK POSITIONERS:** Moves the forks together or apart in relation to one another to adjust for various load types.

**DIMENSIONING DEVICES:** Dimensioning devices offer cargo dimensions to create more warehouse efficiency and better truck and trailer space. This is commonly used with billing systems that record volume.

**ROTATOR:** Assists in righting skids that have tilted, handling custom load requirements and quick unloading. Many attachments include a rotator feature.

**ROLL AND BARREL CLAMP:** Allows for grasping of load with a rounded shape, such as rolled material and barrels, often with various pressure setting to avoid damage to more fragile materials. These attachments sometimes also have a rotate function to assist with, for example, rotating an item from a horizontal to a vertical position.

**CARTON AND MULTIPURPOSE CLAMP:** The carton and multipurpose clamp has pressure settings and is used for handling more squared shaped loads. It easily masters boxes, bales and cartons.

**POLE ATTACHMENTS:** Pole attachments are placed where the forks would normally be and are used for transporting carpet and rolled up linoleum.

**SLIP SHEETER OR PUSH-PULL:** The slip sheeter or push-pull allows the operator to move sheets by clamping onto slip sheets. This is an option instead of relying on pallets. The slip sheet can be moved onto thin and wide metal forks to simplify loading or unloading by pushing the slip sheet. The “Save” variation allows the slip sheet to be taken off for reuse later. The “Standard,” attachment variation is another option.

**DRUM HANDLER:** The drum handler is built for holding drums. It may have arms that encompass the drum for transporting or it may feature a spring-loaded jaw to grip the drum’s top lip.

**DRUM AND STORAGE BIN TIPPER:** The drum and storage bin tipper is designed for easier transport of liquid items or loose materials into bigger containers.

**MAN BASKET:** The man basket is a lift platform to allow workers to complete jobs with brackets and railings and safety harnesses.

**TELESCOPIC FORKS:** Telescopic forks are used in warehouses that rely on stacking two pallets in the event one shelf is located behind another shelf with no aisle in between.

**SCALES:** Scales are helpful for allowing operators to transport pallets while weighing them. This stops the need for interrupting work with regular travel to the scales. It can be used in legal-for-trade weights for operations that bill by how much items weigh.

**SINGLE-DOUBLE FORKS:** Single-double forks facilitate movement of a single platform or pallet or two side-by-side pallets. This is useful for transporting specialty items with the right attachments employed. It can be used with normal lifting tasks and stops the need for owning two separate machines. This greatly reduces the cost of maintenance and operation that is used with multiple forklifts.

**SNOW PLOW:** Snow plows are used to remove snow and redistribute it; however, this attachment can be used with other loose kinds of material.

**SKIPS:** Skips enable quick and safe waste removal to a skip or waste compactor. They may feature a bottom-emptying design or be a roll-forward model.

**BOOMS AND JIBS:** Allow for extended reach of a forklift to transport suspended loads or loads that are stacked high or deep. They are available in different setups such as reach over and precision lifting or low profile fixed and extendable lengths.
